

Session 7: Achieving Climate Neutral Cities by 2030: Mission impossible?

Key points from the discussion

1. Challenge to make knowledge on climate neutrality available not only for selected cities but for all other cities in Europe. And WHO is providing and translating this knowledge?
2. Acknowledging the resource scarcity - implementation of any ideas is also limited/ needs to take into account and be realistic about shortage of resources!
3. The cities quite often miss the capacity to dig through the information - cities need support in access to good information in a quick, efficient way! And this about trust - the advice is appraised on how good it is based on trustworthiness of the information provider!
